(54) Title: SYSTEM AND METHOD FOR PROVIDING INTEGRATED COMMUNICATION ID

(57) Abstract: The present invention discloses a system and method for providing an integrated communication ID and it is an object of the present invention to allow a caller to connect to a receiver's a variety of communication equipments conveniently, with only an integrated communication ID of the receiver being perceived, by allocating a single, inherent communication ID to multiple users and managing multiple directory communication equipment data to enable call connection. In the application of the present invention, with only the integrated communication ID of the receiver being perceived, the caller can execute connection to the corresponding receiver's mobile communication terminal devices, wired terminal devices, facsimiles, homepages and the like by relaying, and an unspecified, third party can access conveniently to a variety of public open information using one integrated communication ID. By this, there is no need to memorize a wide variety of number including various telephone numbers, homepage URLs, mail IDs, messenger IDs and the like among the flood of information.
